

The caterpillar
- a modular play system

Richter Spielgeräte GmbH

The **original**, for more than 40 years!

Play value

The caterpillar is a friendly play offer for small children. The harmonious appearance of the figure and the way in which it is possible to play from both sides offer a lively and pleasant basis for smaller playing spaces. The space partitions promote communicative play, but also make it possible to create borders and divisions of the play areas. Alongside many different sand play offers such as sand shovel, sand dump, sieve, turntable, baking table and sand channels, there are coloured viewing windows, bells, a marble run, visually revolving disc, access hatch, sun sail and

offers for role play such as the "kitchen". This can also be fitted with a water connection via a garden hose.

Components

- 1 head with horns
- 1 element: baking table with sand sieves and shovels
- 1 element: sand see-saw and shovels
- 1 element: turntable
- two-way channel and shovel
- 1 tail

- 1 sun sail

5.00020 type 03

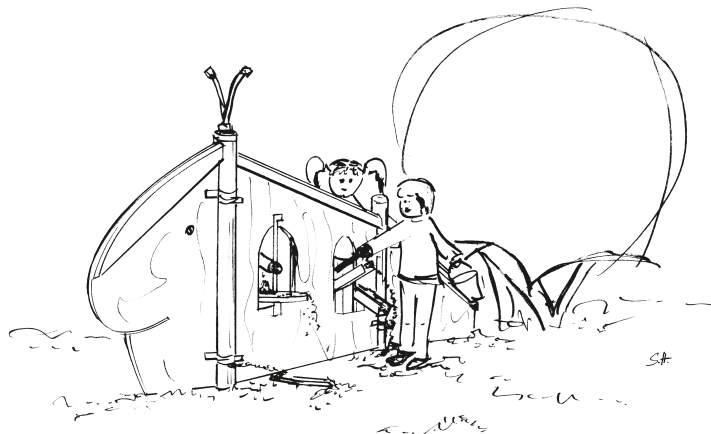

Components

- 1 head with horns
- 1 element: turntable
two-way channel and shovel
- 1 tail

5.00025 type 04

Planning information

The angles of the opposing wall elements and their number can be freely selected to a great extent. Both spread-out as well as more closed floor plans can be constructed. By freely selecting and arranging the individual elements, it is possible to carry out planning according to your requirements. The elements can also be used as partitioning play units without caterpillar head and tail.
